CCM Circle Light Art Festival

Claire Michels

the wood wide web

- Natural elements of the world around us are often seen as static and oblivious to human life.
- However, trees are much livelier than they appear. The original world wide web was a root system of trees.

○ In a world increasingly connected by technology, we forget that networking is not a human concept.
   ▫ Root systems have connected trees for billions of years before humans even dreamed of the internet.
○ UV light reveals the hidden underground network system that exists beyond the human experience.

Visitor Experience
- The everyday concept of a tree becomes transformed at night with UV lighting up paint only visible in those wavelengths.
- Projected imagery around circle of trees provoke deeper understanding of the complexity of trees

Location/Render

- ○ invisible uv paint
- ○ uv floodlights
- ○ natural rope
- ○ push pins

approx. budget: $600-700

A Forest for the Trees
